Taper Type

- A -

Parallel Type

- B -

- Notes:
- L_a is the required acceleration length as shown in Table 10-3 or as adjusted by Table 10-4.
 - Point A controls speed on the ramp. L_a should not start back on the curvature of the ramp unless the radius equals 300 m [1000 ft] or more.
 - L_g is the required gap acceptance length. L_g should be a minimum of 90 to 150 m [300 to 500 ft], depending on the nose width.
 - The value of L_a or L_g , whichever produces the greater distance downstream from where the nose equals 0.6 m [2 ft], is suggested for use in the design of the ramp entrance.
