Monoprice select mini v2 driver. Monoprice select mini v1 manual.

Page 14 2. With the printer powered on and the Main Menu displayed, touch the Move button on the Main Menu, then touch the button to enter the Bed Level Correction Menu. Electric and Electronic Equipment (WEEE) This document contains important information for users with regards to the proper disposal and recycling of Monoprice products. If you ever need assistance with your new product, please come online to talk to one of our friendly and knowledgeable Tech Support Associates. The connection will be completed within 10 ~ 60 seconds, the message MP Select Mini Pro is now connected to Wi-Fi will be displayed on your device's screen, and the IP address will be displayed at the top of the printer's LCD screen. The Machine Settings screen will display. Click Finish to complete the installation and launch the Cura program. When printing over USB, the print will not appear to start on the LCD until the bed heats up, which is very non-user friendly, and may make people the printer is broken. Continue touching the button until several centimeters of filament have been extruded. Which leads to my next point.7. There is no way to offset the z-stop stock(so you can raise the home position of the hot end). LCD Touch Screen 5. You will want to perform Auto Leveling after you unbox the printer or move it. 8. Page 16 8. PRODUCT OVERVIEW 1. Remove the printer from its packaging and place it on a flat, stable surface with plenty of ventilation and a nearby AC power outlet. This can be reduced by butting the ptfе tubing into the heat break, but never totally eliminated. Click the Add Printer button to continue. Refer to Cura's documentation for operating instructions. Can't beat this for the price. Page 1 Select Mini Pro 3D Printer P/N 33012, 33286, 33287 User's Manual... Congratulations, you have installed Cura and connected to your PC to your new 3D printer. Page 15 5. INTRODUCTION Thank you for purchasing this 3D printer from Monoprice! This printer features a single extruder, which is capable of printing in PLA, ABS, and other materials. 12 WI-FI SETUP .....12 SOFTWARE INSTALLATION AND SETUP ..... However, upgrading the extruder body with a MK8 aftermarket body with an adjustable filament grip pressure, and adding a cooling fan to the stepper driver heatsink will fix your problem. Compare the first layer with the images in the table below to determine whether the build platform needs to be leveled or not. Click the Next button to continue. There may be a remote risk of electric shock from the surge caused by lightning WARNING: The external power adapter or AC power cord is the equipment's disconnection device. Unsupported, the gantry sags so much the right side of the build plate had to be tightened all the way down to become level. CONTENTS SAFETY WARNINGS AND GUIDELINES .....3 INTRODUCTION ..... Listing them below:1. If the Main Menu is displayed, touch the Move button to enter the Move Menu. Feed Mechanism 2. Page 10 18. The header on the mainboard meant for a stepper cooling fan is faulty, the mosfet for it was soldered the wrong way around ... Click Printer > Printer > Add Printer:... Since the gantry is only supported on one side, and it will eventually begin to sag to the right. Safety Notice WARNING: Do not use this product near water, for example, in a wet basement or near swimming pool or in an area where accidental contact with water or liquid might occur WARNING: Avoid using this product during an electrical storm. Touch the Tune button to enter the Bed Level Correction menu, then touch the FAR button to increase the gap between the nozzle and the bed or the CLOSE Note that the Bed Level Correction value must be less than button to decrease the gap. Input Power Jack and Power Switch... 7. I also recommend using the 'Zero Offset' mounting kit for the E3d V6 off of thingiverse.4. The metal digs into the wiring where it feeds out of the top of the printer and will eventually cut through a wire. 4 FEATURES .....4 CUSTOMER SERVICE .....5 PACKAGE CONTENTS .....5 PRODUCT OVERVIEW .....6 SETUP .....7 AUTO LEVELING .....11 LIVE LEVELING ..... If you have any problem with your order, please give us an opportunity to make it right. You can now use Cura to print models and create gcode files for your printer. It makes no sense for there to be so many unnecessary screws to get the panels off.6. The aluminum bed will warp on you, as this is what aluminum does. Page 9 14. Click the Other option, then choose the Monoprice Select Mini V2 (E3D) entry. You have to 3d print a spacer for the job, which is quite silly.8. The temperature reading is inaccurate, and there is no way to fully calibrate it, meaning you have to figure it out yourself for each filament.9. The stepper driver for the extruder has tendencies of overheating, I assume because the stepper is a bit weak for the job. I don't know any fixes for this other than patience.3. The stock hot end is only good for PLA, and is prone to jamming due to a gap being between the PTFE tubing feeding into the heatsink and the hot end's heat break. declares the product described within this user guide or manual is in compliance with below applicable directives. If already on the Move Menu, touch the button (enclosed in red in the image below) to start feeding filament into the extruder. SAFETY WARNINGS AND GUIDELINES Be careful not to damage the printing surface on the build plate. LIVE LEVELING While printing the model, you can use this function to fine tune the gap between the nozzle and the bed. In that event, you're right to use the equipment may be limited by FCC regulations, and you may be required to correct any interference to radio or television communications at your own expense. Click the Finish button to continue. Modifying the equipment without Monoprice's authorization may result in the equipment no longer complying with FCC requirements for Class B digital devices. Consumers are required to comply with this notice for all electronic products bearing the following symbol: For Consumers in the European Union: This EU Directive requires that the product bearing this symbol and or its packaging must not be disposed of with unsorted municipal waste. There are a few different models on thingiverse to choose from.2. The bed heating is VERY underpowered, and only makes it safely to 70c(60c from the UI). The quality of the prints are amazing as is the build quality, I can't understand the price being so low...Edit: I have ran into a few issues since I bought it, so I knocked off a couple stars. Filament Rack 3. Use the file browser to select an install directory or accept the default directory (recommended). This will cause things like the edges of the print being too close to the nozzle, while simultaneous the middle of the bed being too far from the nozzle, a piece of glass to sit on the bed will correct this. SETUP Perform the following steps to prepare the printer for use. I ended up replacing the hot end entirely with an E3D V6 hotend with an all metal heat break, and have been very happy with the upgrade. 1. Open the Accessories box and remove the Filament Rack. EU Declaration of Conformity Monoprice, Inc. The full text of the EU Declaration of Conformity is available at the following internet address: ... The screenshots below show the proper Repetier-Host settings to use for this printer. Page 8 10. If it does need adjustment, touch the AUTO LEVELING Cancel button, then perform the steps in the section. This was corrected by buying a 6mm rod and linear bearing and 3d printing a gantry support. Extruder 4. You can print from a Windows® or Mac® PC using a USB connection or can print from 3D model files stored on a microSD card, without the need for a PC connection of any kind. The fix is to use a better cable wrap, like one of those braided cable wraps.5. This printer is too troublesome to disassemble for general maintenance. TECHNICAL SUPPORT Monoprice is pleased to provide free, live, online technical support to assist you with any questions you may have about installation, setup, troubleshooting, or product recommendations. This leads to my final point.10. SPECIFICATIONS Model 33012 Extruder System Single Maximum Extruder Temperature 280°C Maximum Build Plate Temperature 70°C Build Plate Heated removable aluminum Display Type 3.3" touch screen Printing Area 4.7" x 4.7" x 4.7" (120 x 120 x 120 mm) Supported Materials ABS, PLA, PETG, etc. Click the Next button on the Welcome screen, then click the I Agree button on the License Agreement screen. This means you have to run the fan at 100% all the time instead of it being temp controlled, which can be a little annoying to listen to. Press the Connect to WiFi button on your mobile device. Do not remove the insulating tape on the extruder nozzle. Touch the Back button on the Preheat Menu to return to the Main Menu, then touch the Move button on the Main Menu to enter the Move Menu. 6. Micro USB and MicroSD Ports 6. 3. Take care to avoid touching hot parts, including heat blocks, extruder nozzle, extruded filament, and the heated build plate. Repetier-Host You can also install Repetier-Host from the file on the included microSD™ card. While the printer is heating, open your filament. You can contact a Monoprice Customer Service representative through the Live Chat link on our website www.monoprice.com during normal business hours (Mon-Fri: 5am-7pm PT, Sat-Sun: 9am-... Using a pair of scissors or side cutters, diagonally snip the end of the filament to make a point, as shown in the images below. 11. 2. Highly recommended. AUTO LEVELING If the gap between the nozzle and the build platform is not correct, use the Auto Level function to adjust the gap.
